**GENUGTEN AGRI BV**

## Steel construction

**Genugten Agri B.V. supplies and installs complete steel structures, constructed with steel or wooden purlins. We make structural calculations for both the total steel construction and the purlins.**

## Steel purlins

The use of steel purlins enables a greater span to be created. As a result, the number of roof trusses required will be lower and they can be placed further apart, enabling wider rooms to be constructed in the house. Steel purlins, which can be used for spans of 6 to 12 metres, can easily be installed on the roof trusses which carry them. Holes are made in the purlins to suspend a “SOFT-AIR” ventilation ceiling.

Our ample experience in steel construction enables us to offer you the right solutions for various animal house systems.
